**Statement From Michael Hansen, CEO Of Elsevier's Health Sciences Division,
Regarding Australia Based Sponsored Journal Practices Between 2000 And 2005**

Philadelphia, PA, 7 May 2009 - Elsevier, one of the world's leading publishers of scientific, technical, and medical (STM) information products and services, announced today that Michael Hansen, CEO of Elsevier's Health Sciences Division, issued the following statement in light of recent allegations of improper Australia based sponsored journal publication practices between 2000 and 2005:

"Elsevier prides itself on operating its business in the most ethical, honest and transparent manner possible. We have been stewards of the scientific record for more than 125 years and we take our role in advancing medical and scientific research seriously.

It has recently come to my attention that from 2000 to 2005, our Australia office published a series of sponsored article compilation publications, on behalf of pharmaceutical clients, that were made to look like journals and lacked the proper disclosures. This was an unacceptable practice, and we regret that it took place.

We are currently conducting an internal review but believe this was an isolated practice from a past period in time. It does not reflect the way we operate today. The individuals involved in the project have long since left the company. I have affirmed our business practices as they relate to what defines a journal and the proper use of disclosure language with our employees to ensure this does not happen again.

We will continue to partner with all scientists and clinical investigators, including those in the pharmaceutical industry, to help communicate the findings of high-quality, peer-reviewed medical research. We have strict disclosure rules in place so that readers are aware of any financial interests behind a specific article or journal, or when entire compilation products are created for pharmaceutical marketing purposes.

I understand this issue has troubled our communities of authors, editors, customers and employees. But I can assure all that the integrity of Elsevier's publications and

business practices remains intact.”

About Elsevier

Elsevier is a world-leading publisher of scientific, technical and medical information products and services. Working in partnership with the global science and health communities, Elsevier’s 7,000 employees in over 70 offices worldwide publish more than 2,000 journals and 1,900 new books per year, in addition to offering a suite of innovative electronic products, such as [ScienceDirect](#), [MD Consult](#), [Scopus](#), bibliographic databases, and online reference works.
